Yoghurt Dispensing Solution

IMO Jeambrun SAS were approached by a systems integrator with a customer wanting to manufacture a specialised food packaging machine designed for dispensing yoghurt. The customer had a fixed budget, which meant that the integrator needed to source products at a highly competitive price, yet not compromising on quality or functionality.

The end customer had previously specified 2 leading automation manufacturer brands, however, due to costing issues, they needed to find a more competitive solution, for which the integrator favoured IMO products.

The yoghurt dispensing machine uses sensors, a foot switch, miniature circuit breakers, AC isolator, power supply and a human machine interface, and all IMO products were used to meet this demand. Additional to these products, the integrator is currently testing an IMO Variable Speed Drive for AC Motors for its suitability for use in the machine, along with a brushless drive also to be supplied by IMO Jeambrun.

The result is a fully functional rotary yoghurt dispensing machine which meets the demands of the customers' limited budget.

“

My customer needed to replace a number of specified components in their food packaging machine prototype due to very high costs and a limiting budget. After looking into the various options for these components, I was happy to find IMO products as they offer the quality that is needed, for a price that is right. Installation was not difficult and the result is a happy customer.

Testimonial, System Integrator

We are very happy with the outcome of this project. The system integrator was able to provide a solution for us at a price that suited our budget. Functionality is perfect, and we are looking forward to converting the remaining products from other manufacturers to IMO products, as soon as testing has been completed.

Testimonial, End Customer
